

Description

Director DR6 is a coving-mounted remote controlled spotlight with a unique fitting that allows its head to rotate 90° in both the vertical and horizontal planes. To be installed on covings, beams, or other flat surfaces, it is controllable in two axes and dimming using the hand-held controller, DMX or DALI Sequencing and a range of accessories are available. DR6 is compatible with most world voltages and frequencies.

Applications

The DR6 was designed for use in applications where access was difficult and conventional lighting could not be used due to listed building restrictions and aesthetics. Churches, museums, galleries and barns are ideal locations for the DR6.

Individual Selection

The patented method of selection using a laser from a hand-held controller allows individual control over each fitting. The Global function allows multiple units to be dimmed or the recall of stored positions. Alternatively, control by DMX or DALI is also available.

Lamp Change

The design of the DR6 allows for a simple lamp change without the use of tools.

Vertical Movement

The innovative technology within the DR6 allows the user precise control over the direction of the beam in the vertical plane from horizontal to straight down.

Accessories

The anti-glare snoot is fitted as standard. Other accessories are also available. See below for details.

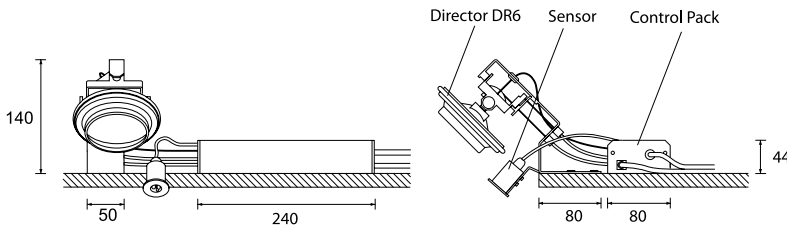

Horizontal Movement

The innovative technology within the DR6 allows the user precise control over the direction of the beam in the horizontal plane +/- 45° from the central axis.

Mounting Plate

A mounting plate is available for easy mounting and can be supplied for one, two or three DR6 units.
