

Description

Director DR7 is a fully recessed remote controlled spotlight without a ceiling trim that is controllable in pan, tilt and dimmer level using the hand-held controller, DMX or DALI. It uses an innovative pan and tilt technology, which means no physical components protrude below the ceiling line. Pre-recorded positions can be stored and recalled easily. A range of accessories is available. DR7 is compatible with most world voltages and frequencies.

Applications

The DR7 is ideal for installations where discretion is key. High ceilings in ballrooms and banqueting halls demand the functionality of a pinspot without interrupting the room's aesthetics. Colour filters can be added to create a mood lighting effect across the table.

Individual Selection

The patented method of selection using a laser from a hand-held controller allows individual control over each fitting. The Global function allows multiple units to be dimmed or the recall of stored positions. Alternatively, control by DMX or DALI is also available.

Lamp Change

The design of the DR7 allows for a simple lamp change without the use of tools.

Pan & Tilt Rotation 360° / +/-35°

The innovative technology within the DR7 allows the user precise control over the direction of the beam.

Front Bezel

The front bezel conceals the mechanism but is easily removed for lamp change.

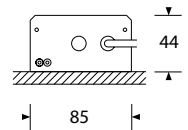

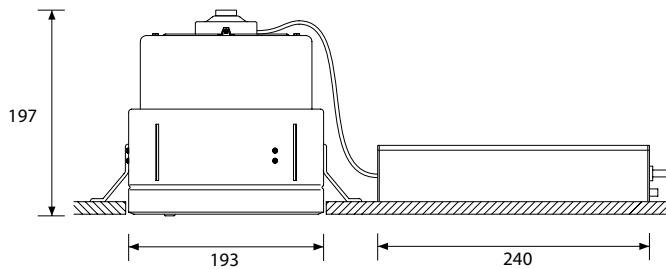

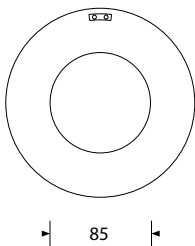

Beam Control

The accessory holder in the head of the DR7 allows for numerous accessories. See below for details.

Installation & Maintenance

The complete DR7 unit is held in the ceiling by a sleeve which is installed first. A twist and lock bayonet system holds the DR7 in place.
